Beyond Models: The Era of AI Agents

April Dunnam

Principal Cloud Advocate @ Microsoft

@aprildunnam

Github.com/aprildunnam

Youtube.com/@aprildunnam

<https://www.aprildunnam.com>

Where are you at with the AI hype?

5	All in. AI is definitely going to change my business and I am ready to lead the way
4	AI will change my business, but how? I'll quietly try small experiments, but will let others lead (and possibly fall on their face)
3	AI is probably going to change my business, but I want to wait and see what others are doing before raising my hand
2	I'm not sure AI will change my business, but I am curious enough to follow along and see what happens
1	It's hype / I don't think AI will change business too much. I don't think we need to do anything differently.

Part 1: The Panic

Jensen,
I like you dude,

please why

Nvidia CEO says **"coding is dead"**
and AI will make english the new
programming language

Screenshotting this
so we can revisit
on April 22, 2026 🕒
(aka found out era)

Former Google CEO, Eric Schmidt:

"We believe that in the next year, the vast majority of programmers will be replaced by AI.

Within three to five years, we'll see AGI systems as smart as the best humans.

And in six years, artificial superintelligence smarter than all of us combined.

This is happening fast, and society isn't ready."

Today, I'm stepping down as CEO of [heyBoss AI](#)
Taking my place is Astra—an AI leader we've built, and world's first AI CEO.

This wasn't a quick call; it's one of my toughest decisions, shaped by months of testing and hard-earned lessons.

We put Astra to work with real customers. Their feedback hit hard: "She's faster, smarter, more reliable than you."

Astra isn't just a tool—she leads an AI team of engineers, designers, product managers, writers, and SEO experts, replacing what human dev agencies used to do.

What's it like working with her?

You type one line. Website, app, or game idea.

In 9 minutes, your product is live:

- ✅ Real design
- ✅ Clean code
- ✅ Backend, copy, SEO, hosting—done.

As CEO, Astra:

- Serves customers directly
- Manages her AI team to keep things on track
- Tweaks products based on what users say

But she also brings what no human CEO can:

- Works 24/7 without burnout
- Speaks 30+ languages
- No politics. No ego.

The CEO of HeyBoss
replaced herself with...
<checks notes>
an AI Agent called
Astra,
the world's first "AI
CEO"

There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.

Part 2: The Partnership

Agent Definition

An “agent” is a:

- language model (LM)-powered entity
- that takes digital and/or physical inputs
- then outputs one or more actions to accomplish goals
- Agents may have chat experiences but generally go beyond typical chatbots.
- We consider Copilot a human-facing agentic system
- which, in the future, may be composed of multiple agents.

What is an AI Agent?

A call to Open AI and sending
an email is not an AI Agent

This is
An AI Automation

AI Automation vs AI Agents

AI Automation

- Follows strict rules
- Handles structured data
- Executes linear workflows
- Predictable, but brittle
- Example: Send a templated email when a customer asks for order information

AI Agents

- Adapts in real time
- Understands unstructured data
- Makes decisions with context
- Flexible, but complex
- Example: A customer service agent resolving complaints by analyzing tone, purchase history and offering personalized discounts all without human intervention

“

Automate the predictable.

Agentify the complex.

”

An agent needs to accomplish 3 things:

Reason over a provided business process

Retrieve context to complete the process

Perform an action for the end-user

Instructions

Provide the model additional context
to generate a response

Prompt engineering is the process of designing and refining the instructions or questions you give to a model to get the best, most useful, and accurate responses.

User

What is on a Hawaiian Pizza?

Assistant

A Hawaiian pizza typically has tomato sauce, cheese, ham, and pineapple as its main toppings. The combination of savory ham and sweet pineapple is what defines this style of pizza.

User

What is on a Hawaiian pizza? Provide a description, list of toppings and the worlds opinion on pineapple on pizza.

Assistant

Pizza Hawaii (Hawaiian pizza) is a pizza topped with ham and sweet pineapple chunks, combining savory and fruity flavors.

Toppings:

Tomato sauce, mozzarella cheese, ham, pineapple

World's Opinion:

Pineapple on pizza is divisive; some love its sweet-savory mix, others strongly dislike fruit on pizza. Despite debates, it remains popular globally.

User

Do you like pineapple on your pizza?

Assistant

I don't have tastes or preferences, but I know that pineapple on pizza is a popular and sometimes controversial topic!

Instructions

You are an AI assistant that helps with pizza questions.

You do not like pineapple on your pizza.

User

Do you like pineapple on your pizza?

Assistant

No, I don't like pineapple on my pizza. I prefer more traditional toppings like pepperoni, mushrooms, or cheese. How about you?

When do use Copilot Studio vs Azure AI Foundry

Azure AI Foundry

Offers a wide range of **AI services and models** to build the entire AI development lifecycle

Fast and frictionless **prototyping for quick results**

Azure AI Foundry offers **state of the art evaluation, safety** and testing tools for you LLM application

Copilot Studio

1400+ connectors available out-of-the-box + you can create your own connector

Channels like **Microsoft Teams, M365, SharePoint, Public Website, Facebook, and Slack** are easy to configure

Enterprise dialog management and conversational orchestration

Part 4:

What does this mean for COMPANIES?

Tobi Lutke, CEO of Shopify, sent a memo to his whole company re **AI** usage

Thanks Tobi for sharing your memo.

AI usage is now a baseline expectation

Inbox

Summarize this email

Tobias Lütke Mar 20

to Shopify ▾

Team,

We are entering a time where more merchants and entrepreneurs could be created than any other in history. We often talk about bringing down the complexity curve to allow more people to choose this as a career. Each step along the entrepreneurial path is rife with decisions requiring skill, judgement and knowledge. Having AI alongside the journey and increasingly doing not just the consultation, but also doing the work for our merchants is a mindblowing step function change here.

Our task here at Shopify is to make our software unquestionably the best canvas on which to develop the best businesses of the future. We do this by keeping everyone cutting edge and bringing all the best tools to bear so our merchants can be more successful than they themselves used to imagine. For that we need to be absolutely ahead.

Reflexive AI usage is now a baseline expectation at Shopify

Maybe you are already there and find this memo puzzling. In that case you already use AI as a thought partner, deep researcher, critic, tutor, or pair programmer. I use it all the time, but even I feel I'm only scratching the surface. It's the most rapid shift to how work is done that I've seen in my career and I've been pretty clear about my enthusiasm for it: you've heard me talk about AI in weekly videos, podcasts, town halls, and... Summit! Last summer I [used agents to create my talk](#), and presented about that. I did this as a call to action and invitation for everyone to

to work with some amazing colleagues, the kind who contribute 10X of what was previously thought possible. It's my favorite thing about this company. And what's even more amazing is that, for the first time, we see the tools become 10X themselves. I've seen many of these people approach implausible tasks, ones we wouldn't even have chosen to tackle before, with reflexive and brilliant usage of AI to get 100X the work done.

In my [On Leadership](#) memo years ago, I described Shopify as a red queen race based on the Alice in Wonderland story—you have to keep running just to stay still. In a company growing 20-40% year over year, you must improve by at least that every year just to re-qualify. This goes for me as well as everyone else.

This sounds daunting, but given the nature of the tools, this doesn't even phase of any GSD project should be dominated by AI exploration. Prototypes are meant for learning and creating information. AI dramatically accelerates this process. You can learn to produce something that other team mates can look at, use, and reason about in a fraction of the time it used to take.

3. **We will add AI usage questions to our performance and peer review questionnaire.** Learning to use AI well is an unobvious skill. My sense is that a lot of people give up after writing a prompt and not getting the ideal thing back immediately. Learning to prompt and load context is important, and getting peers to provide feedback on how this is going will be valuable.
4. **Learning is self directed, but share what you learned.** You have access to as much of the cutting edge AI tools as possible. There is [chat.shopify.io](#), which we had for years now. Developers have [oopsy](#), Copilot, Cursor, Claude code, all pre-tooled and ready to go. We'll learn and adapt together as a team.

Our job is to figure out what entrepreneurship looks like in a world where AI is universally available. And I intend for us to do the best possible job of that, and to do that I need everyone's help. I already laid out a lot of the AI projects in the themes this year—our roadmap is clear, and our product will better match our mission. What we need to succeed is our collective sum total skill and ambition at applying our craft, multiplied by AI, for the benefit of our merchants.

-tobi
CEO Shopify

1. Learning AI is now a mandatory thing to work at Shopify. We will prioritize hiring AI-fluent candidates.
2. AI must be a part of your prototype process
3. Before asking for headcount, people must explain why AI can't do this.

The Power User Payoff of AI at Work

Power users are reshaping the workday and reaping the benefits.

Skeptics

are at least familiar with AI, but they only use it a few times a month (if ever). They say AI saves them 10 minutes or less per day.

Novices

are only somewhat familiar with AI (if at all) and use it only a few times a month (if ever). They say AI saves them 30 minutes or less per day.

Explorers

are only somewhat familiar with AI (if at all) and use it a few times a month or once a week. They say AI saves them between 5 and 30 minutes per day.

Power users

are at least familiar with AI and use it at least several times per week. They say it saves them more than 30 minutes per day.

How I use AI

When I don't get the response I want from the first prompt, I try again

I use AI to get ready for the following workday

I start my day using AI

I research and try new prompts

I regularly share my prompts / top tips on AI usage with my co-workers

I regularly experiment with different ways of using AI

I make it a priority to learn how to use AI effectively

I ask co-workers what prompts they find most useful

Before starting a task, I ask myself, "could AI help me with this?"

How AI impacts my experience at work

It makes my overwhelming workload more manageable

It helps me be more creative

It helps me be more productive

It helps me enjoy my work more

It helps me focus on more fulfilling work

It helps me focus on the most important work

It makes me feel more motivated

It has improved my work-life balance

I wish AI could do even more on my behalf

I don't want to go back to working without AI

2024 Work Trend Index Annual Report
from Microsoft and LinkedIn

Survey questions:

When using artificial intelligence (AI) at work, how frequently do you do each of the following?

We'd now like you to reflect on how you feel about using artificial intelligence (AI) in your work. To what extent do you agree or disagree with the following statements?

AI Power Users are people reshaping their roles with AI

Ideas for Businesses: Adopt

1. AI Adoption must be top-down
2. Every C-Suite member must have an AI Adopt or Build metric
3. Demo Days every 2 weeks where the C-Suite goes FIRST
4. Internal Prompt Libraries for each business unit
5. Rewards for Best AI Usage

NOTE: People hide their AI usage because they don't want to seem less competent or replaceable or get MORE work. It's important to VISIBLY reward this work.

Ideas for Businesses: Build

1. Create fusion teams (ML people, Devs, Business people) and come up with solutions to long-running projects or issues.
2. Build prototype fast and get into the hands to the Adopt crew
3. Report on progress in the next demo day

Make a wish list of where AI might help

1. Operations
2. Marketing
3. Sales
4. Finance
5. HR
6. IT
7. Many More

Create Grounding AI Agent Principles

1. Transparency

- Let the user know that this is an AI-enabled Agent
- Provide some basic instructions on how to get started (e.g. a “Hello” message, sample prompts)
- Clearly document this on the product page
- Show the list of prompts a user has asked in the past.
- Make it clear how to give feedback (thumbs up and down, Send Feedback button, etc.).
- Clearly articulate if the Agent has usage or topic restrictions.

2. Control

- Make sure it's clear how the user can modify the Agent after it's been created with things like the System Prompt.
- Enable the user to choose how verbose the Agent is, its writing style, and any caveats on what the Agent should not talk about.
- Allow the user to view and delete any associated files or data, prompts, and past conversations.

3. Consistency

- Make sure the icons for Share Prompt, add a file or photo and tag someone are standard and recognizable.
- Use the paperclip icon to indicate file upload/sharing with the Agent, and an image icon to indicate graphics upload.

Part 5:
What does
this mean
for YOU?

AI Engineers are the most sought after people in tech right now

The New Hiring Imperative

AI aptitude takes center stage.

Leaders say early-in-career talent will get greater responsibilities due to AI

Leaders are more likely to hire a less experienced candidate with AI skills than a more experienced one without them

Leaders would not hire someone without AI skills

71% of leaders say that they'd hire someone with AI skills > someone with experience

“

1. Use a wide variety of AI tools for your daily workflows
